A Living Review of Quantum Information in High Energy Physics

Abstract: Inspired by "A Living Review of Machine Learning for Particle Physics"[1], the goal of this document is to provide a nearly comprehensive list of citations for those developing and applying quantum information approaches to experimental, phenomenological, or theoretical analyses. Applications of quantum information science to high energy physics is a relatively new field of research. As a living document, it will be updated as often as possible with the relevant literature with the latest developments. Suggestions are most welcome.

[1]See https://github.com/iml-wg/HEPML-LivingReview.

The purpose of this note is to collect references for quantum information science as applied to particle and nuclear physics. The papers listed are in no particular order. In order to be as useful as possible, this document will continually change. Please check back[2] regularly. You can simply download the .bib file to get all of the latest references. Suggestions are most welcome.

1 Reviews

1.1 Quantum Machine Learning in High Energy Physics [1]

- **HEP Context:** Di-photon event classification, galaxy morphology classification, particle track reconstruction, and signal-background discrimination with the SUSY data set
- **Methods:** Quantum machine learning using quantum annealing, restrictive Boltzmann machines, quantum graph networks, and variational quantum circuits
- **Results and Conclusions:** This paper presents several papers on performing classification using quantum machine learning. The studies presented some of the challenges faced, such as the restrictive problem formulation for quantum annealers and the limited performance due to hardware restrictions for quantum-circuit-based machine learning.

2 Whitepapers

2.1 Quantum Simulation for High Energy Physics [2]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

2.2 Quantum Computing for Data Analysis in High-Energy Physics [3]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

[2] See https://github.com/PamelaPajarillo/HEPQIS-LivingReview.

2.3 Snowmass White Paper: Quantum Computing Systems and Software for High-energy Physics Research [4]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

3 Quantum Optimization Algorithms Based on Gate-Based Quantum Computers

4 Quantum Optimization Algorithms Based on Quantum Annealing

4.1 Degeneracy Engineering for Classical and Quantum Annealing: A Case Study of Sparse Linear Regression in Collider Physics [5]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

4.2 Quantum Annealing for Jet Clustering with Thrust [6]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

4.3 Leveraging Quantum Annealer to identify an Event-topology at High Energy Colliders [7]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

4.4 Charged particle tracking with quantum annealing-inspired optimization [8]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

5 Quantum Machine Learning Algorithms Based on Gate-Based Quantum Computers

5.1 Application of quantum machine learning using the quantum variational classifier method to high energy physics analysis at the LHC on IBM quantum computer simulator and hardware with 10 qubits [9]

- **HEP Context:** Signal-background discrimination, where signal events are $t\bar{t}H$ ($H \to \gamma\gamma$) and $H \to \mu\mu$, and background events are dominant Standard Model processes
- **Methods:** Variational quantum circuits
- **Results and Conclusions:** TBD

5.2 Application of quantum machine learning using the quantum kernel algorithm on high energy physics analysis at the LHC [10]

- **HEP Context:** Signal-background discrimination, where signal events are $t\bar{t}H$ ($H \to \gamma\gamma$), and background events are dominant Standard Model processes
- **Methods:** Support vector machine with a quantum kernel estimator (QSVM-Kernel)
- **Results and Conclusions:** TBD

5.3 Quantum Anomaly Detection for Collider Physics [11]

- **HEP Context:** Anomaly detection in the four-lepton final state
- **Methods:** Variational Quantum Circuits (VQC) and Quantum Circuit Learning (QCL)
- **Results and Conclusions:** After comparing VQC and QCL to traditional classical machine learning algorithms, this paper states that there is no evidence that quantum machine learning provides any advantage to classical machine learning.

5.4 Event Classification with Quantum Machine Learning in High-Energy Physics [12]

- **HEP Context:** Signal-background discrimination, where the signal is a SUSY process, in particular, a chargino-pair production via a Higgs boson, where the final state has two charged leptons and missing transverse momentum. The background event is a W boson pair production WW where each W decays into a charged lepton and a neutrino.
- **Methods:** Variational Quantum Circuits (VQC) and Quantum Circuit Learning (QCL)
- **Results and Conclusions:** TBD

5.5 Quantum Machine Learning for b-jet identification [13]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

5.6 Classical versus Quantum: comparing Tensor Network-based Quantum Circuits on LHC data [14]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

5.7 Anomaly detection in high-energy physics using a quantum autoencoder [15]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

5.8 Implementation and analysis of quantum computing application to Higgs boson reconstruction at the large Hadron Collider [16]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

5.9 Style-based quantum generative adversarial networks for Monte Carlo events [17]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

6 Quantum Machine Learning Algorithms Based on Quantum Annealing

6.1 Solving a Higgs optimization problem with quantum annealing for machine learning [18]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

6.2 Quantum adiabatic machine learning with zooming [19]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

6.3 Quantum algorithm for the classification of supersymmetric top quark events [20]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

7 Quantum Simulation

8 Quantum-Inspired Algorithms

8.1 Quantum-inspired event reconstruction with Tensor Networks: Matrix Product States [21]

- **HEP Context:** TBD
- **Methods:** TBD
- **Results and Conclusions:** TBD

9 TBD
